PREFACE.

In offering to the public a new, improved and abridged edition of his Catalogue, the proprietor has adopted the plan of the London Horticultural Society; believing it to be the most convenient for the information of purchasers and others.

He has for the last twenty-six years, been engaged in the nursery business, during which period he has tested fruits, and retained in his collection only such as have proved of superior quality; there are, however, some varieties recently imported, of celebrity in Europe, which he has worked before they have fruited. He has spared no expense or pains in procuring the best fruits of the different varieties both in Europe and America, and is now testing some hundreds of the old kinds, together with a great quantity of imported and seedling varieties. Many of our fine old varieties of apples have failed within a few years; so much that they are hardly worth growing; some other varieties must be brought forward to take their place, or our stock of apples will become worthless. The proprietor would most respectfully recommend to all persons that have an opportunity, to grow seedling fruits, for to this source we must look for varieties that will best suit our climate.

The Proprietor flatters himself that by a thorough and practical knowledge of his business, together with a large correspondence in Europe, with a fine tract of first rate land for nurseries, as well as by his personal attention to the engrafting and inoculating his trees, he is enabled to ensure to customers his trees and plants of the most select varieties, and true to their respective names. For the genuineness of the trees and plants sent out, he would most respectfully refer to those who have purchased of him, and fruited them for themselves.

In order to insure valuable and healthy trees, seedling stocks are used to work upon, in all cases as far as practicable, and particularly for apples, cherries, plums and pears, none others are used;

thus ensuring fine strong plants, and making much better trees than when worked on suckers, which is often done.

Many of the rare ornamental trees, shrubs, roses, carnations, strawberries, etc., etc., can be imported from Europe at a cheaper rate than they can be raised here. Importations are, and will continue to be made annually. The time for transplanting fruit and forest trees, is November in Autumn, and March and April in Spring. April is the best time for transplanting evergreens.

Persons wishing extra large trees will please send their orders early in Autumn.

The prices of trees and plants have been greatly reduced, and those marked on this Catalogue throughout are for moderate sized trees and plants only; larger sizes will be charged higher than the prices marked, in proportion to their size.

Trees and plants packed so as to carry to any part of the United States or Europe, for which a moderate charge will be made. No care will be spared in the shipment of all orders entrusted to him, but no responsibility will be incurred after they are shipped, as to their safe carriage or ultimate success.

Scions for engrafting, will be furnished at from 25 to 50 cents per dozen; buds for inoculating at from 50 cents to $1.50 per hundred; grape cuttings at from 25 to 50 cents per dozen; but in no case will a single graft or cutting (if only one be ordered) be charged less than the price of a plant of the same kind.

Terms—CASH, or a responsible reference in Philadelphia.

Wholesale dealers will find it to their advantage to call and examine his stock before purchasing elsewhere. A liberal discount allowed to such.

THOMAS HANCOCK.

Ashton Nurseries,

Near Burlington, New Jersey, August, 1849.

CATALOGUE OF FRUIT TREES.

ALMONDS——*Amygdalus.*

20 cents each.

Name.	Shell	Kernel	Remarks.
1 Communis var.	soft	sweet	does not stand the winter well.
2 " Amara var.	hard	bitter	

APPLES—*Pyrus Malus.*

15 cents each, $12.50 per hundred.

Trees marked thus* are only one year's growth on the bud or graft, throughout the Catalogue.

The columns explain, 1. The prevailing color; 2. The usual form; 3. The average size; 4. The use, whether for Table or Kitchen; 5. The quality; 6. The usual season of perfection. The abbreviations are

Prevailing color. p. pale; d. dark; y. yellow; r. red; g. green; rus. russet; str. streaked; w. white.

Size. 1. Large; 2. Middle-sized; 3. Small.

Use. T. Table; K. Kitchen.

Quality. 1. First rate; 2. Second; 3. Indifferent.

REJECTED LIST OF APPLES.

The following varieties I have fruited, and find them worthless with me—

American Pippin or Grindstone,
Cooper's Russetting,
English Codling,
Gloucester White,
Harrison,
Hawthornden,
Henry's Weeping Pippin,
House or Grey house,
Ingestre, Red,
Ingestre, White,
Lord Nelson,
Lucomb's Seedling,
Marmalade Pippin,
Nonsuch,
Old Golden Pippin,
Pomme Gris,
Priestly,
Rowland's Redstreak,
Red or Royal Russett.
Red Sweet. Wetherill's,
Red Sweet, Woolston's,
Reinette, Golden,
Scarlet Pearmain,
Summer Queen,
White Sweet, Woolston's,
Winter Green, Deacon's,
Winter Strawberry.

Many of the varieties are worked on dwarf stocks.

REMARKS.—Our climate is so well adapted to the growth of the Apple, that it will thrive in almost any soil; but a deep rich loam with a dry subsoil, produces the best orchards and finest fruit. High and rolling land, almost unfit for the usual agricultural purposes, will grow excellent apple orchards, and frequently bear fruit when those in low grounds are killed by the late spring frosts. The distance for planting the apple varies from 30 to 40 feet apart, as the elevation, soil, &c. is more or less favorable.

APRICOTS—*Armeniaca Vulgaris.*

On plumb stocks 50 cents each; on peach stocks 30 cents each.

Prevailing color. d. dark; or. orange; p. pale; r. red.
Size. 1. large; 2. middle-sized; 3. small.
Quality. 1. first-rate; 2. second; 3. indifferent.

Name.	Color	Form	Size	Quality	Season	Remarks.
1 Blenheim Shipley's	or.	oval	1	1	July	
5 Burlington $1	or.	round	1	1	Aug.	This is a new Seedling and a
10 Early Pèche	or.		2	1	July	first rate late variety.
4 Hemskirke	or.	round	1	1	Aug.	
6 Golden, Dubois	or.	round	2	1	July	
9 Large Early Precoce	or.	oblong	2	1	Aug.	
11 Large Peach	or.		1	1	Aug.	
3 Moorpark De Nancy	or.	round	1	1	Aug.	very like No. 2, if not the same
2 Pèche Peach Royal	or. r.	round	1	1	Aug.	excellent, one of the best
7 Roman Gold B lotched	y.	oblong	2	1	Aug.	
8 Turkey Large Turkey	d. y.	round	2	1	Aug.	good bearer

Remarks.—The Apricot does best planted against a wall, with a South Eastern or Eastern exposure, but it frequently does well in the open ground or with a South or South Western exposure, particularly in towns or cities. From 12 to 15 feet apart is a good distance for planting the Apricot.

CHERRIES—*Avium Cerasus.*

30 cents each, except those noted.

Prevailing color. am. amber; bl. black; d. dark; p. pale; r. red; w. white; y. yellow.
Form. h. heart-shaped; o. obtuse; ov. oval; ob. oblong; r. roundish.
Size. 1. large; 2. middle-sized; 3. small.
Use. K. kitchen; T. table.
Quality. 1. first-rate; 2. second; 3. indifferent.
Season. b. beginning; m. middle; e. end, of the months to which they are prefixed.

The above Cherries can be supplied, worked on St. Lucie or dwarf Stocks, one years' growth from the bud, at 50 cents each, except Nos. 27, 38, 39, 42, 43, 44, 46, 49, 50, 51 and 53, these last will come at the same price marked opposite their names.

REMARKS.—The Cherry grows and thrives well in nearly every part of the United States. A dry sandy or loamy soil, well elevated, suits it best, but it will grow and thrive well in almost any soil, if not too wet.

From 20 to 30 feet apart is the best distance for planting the Cherry.

GRAPES—*Vitis Vinifera.*

Prevailing Color. bl. black; g. green; pur. purple; r. red; w. white; y. yellow.
Form. ov. oval; rou. round.

13 Violette Hâtive	R	L	F	g r	rou	1	1	e Aug	

Remarks—The Nectarine should be kept well thinned, so as to have plenty of light and air to prevent the fruit from rotting on the tree. Being a smooth skinned fruit, the Curculio attacks it, perhaps worse than any other fruit grown in this section. It should be planted where the unripe fruit that falls can be swept from under the tree, or where hogs or poultry can pick it up. From 20 to 25 feet apart is the best distance for planting the Nectarine.

PEACHES—*Persica Vulgaris.*

8 to 10 cents each; $6 per hundred; extra size, $8 to $10 per hundred.

Leaves. S. serrated without glands; G. having globose glands; R. reniform glands.
Flowers. L. large; S. small.

Remarks.—The Peach is one of the most desirable fruits in the Catalogue. For beauty and fine flavor it stands almost unrivalled. It does very well any where south of the 43° of latitude, but will do best on a dry soil, well elevated. The tree is subject to several diseases, some of them very little known at present. It never succeeds well on the site of an old orchard, unless the ground has been cultivated from 10 to 15 years, after its removal. From 20 to 25 feet apart is the proper distance for planting the Peach. At 20 feet apart it will plant about 100 trees to the acre.

PEARS—*Pyrus communis.*

40 cents each, except those noted.

†This took the Ten Dollar Premium of the Pennsylvania Horticultural Society for 1847, being the best seedling. The original tree came up in a grave-yard, in Kingsessing, near Philadelphia, (near where the original Sickel pear grew) and is a most splendid pear.

N. B. All those marked thus * you will please observe are but one year's growth on the scion.

Remarks.—The pear succeeds best in a deep rich loam with a dry subsoil; 15 to 25 feet apart will answer very well for planting pear orchards.

The pear is easy of culture and very productive in this climate, remaining a long time in use. Many varieties produce the finest fruit when worked on the quince. The delicious qualities of the improved varieties render it one of the most valuable fruits in the catalogue.

To have this fruit in perfection, it should be gathered while hard, and allowed to ripen in the house.

38	Vicomte Fritz de Cussy	cup	cherry red	50
39	Virgile	cup	rose, vigorous habit	25 to 50

Remarks.—The Bourbon rose is perfectly hardy, it stands our Winters without protection, and flowers during the whole season. The Autumnal flowers are splendid. This is one of the finest family of roses known, and deserves extensive cultivation.

CHINESE ROSES.—(*Rosa Indica.*)

No	Common Name.	Form	Color.	Price.
1	Common daily	cup	pink daily	25 to 50
2	Eugene Jorin			50
3	Madam Breon	cup	brilliant rose	50
4	Mrs. Bousanquet	cup	pale flesh	25 to 50
5	Sanguiner	ex	dark crimson	25

Remarks.—These want a slight protection in Winter. Some of them are hardy—Nos. 2, and 5 will stand our winters.

TEA-SCENTED CHINA ROSES.

No	Common Name.	Form	Color.	Price.
1	Devoniensis	cup	yellow, fine	25 to 50
2	Flavescens or yellow	cup	sulphur, very large	25 " $1

17	Vicontesse d'Avesne	cup	rose superb	$1

Remarks.—The Noisette Roses are many of them hardy, but Nos. 4, 7, 8, 10, 11, 12 and 13, require a slight protection in Winter.

MICROPHYLLA ROSES.

No	Common Name.	Form	Color.	Price.
1	Microphylla	cup	bright rose	25 to 50
2	Maria Leonida	cup	white rosy centre	do

REMARKS UPON TRANSPLANTING.

Many persons after procuring trees, crowd the roots into the earth within half the space they had before occupied, which injures the growth of them so much that it often takes two or three years to recover, so as to be as good as when they were taken from the Nursery. Another practice is often adopted which is also very injurious to the growth of young trees, that is, to plant them in a sward.

In removing trees, the ground should be mellow, and not too wet.

The hole for a moderate sized tree should be dug three feet in diameter, and from twelve to eighteen inches deep.

In all cases the hole should be sufficiently large to receive the roots without bending.

Before planting, take care to remove all bruised or broken roots with a sharp knife, by cutting clean from the under side, which will leave the roots in a state for shooting directly into the mellow earth.

When the tree is put into the hole, be careful to break the earth fine, and put it in very carefully, observing to fill all vacancies about the roots.

Shake the tree gently while filling in the earth, but take care not to draw up the tree while filling up, as that will give the roots nearly a vertical position, and is very hurtful to the growth of the tree.

When the hole is two-thirds filled, pour in two to four gallons of water; this will cause the earth to settle, and also fill all vacancies that may remain.

When the water has sunk away, fill up the hole and press the earth moderately around the tree; take care to leave a small cavity about the body of the tree, that the water may be more readily conducted to the roots.

Trees should not be planted more than two or three inches deeper than they stood before removing.

Young orchards for the first ten years after planting, should never be suffered to lie more than one year in a sod at any one time.

THOMAS HANCOCK.

NOTE.—The roses for sale in this Catalogue are all on their own roots, except a few Moss, Garden and Perpetuals. Worked roses do very poorly in our climate, except when grafted in the root; and to have a good collection of roses that will stand well, they should be on their own roots.
